How to Disable OneMx

1. Click the Preferences button in the main window.

2. Select the Directories category, and window look for drives and folders whose names are in bold. These drives and folders have shared sub-folders.
3. Expand the directory trees of the folders whose names are in bold, and uncheck all of the selected check boxes.

4. When there are no more shared folders, all the drives names will be in plain text. Click OK.
